LAUREL K8 FITNESS SORTER

[8 Pocket + 1 Reject Pocket]

HIGH PRODUCTIVITY

The K8 boasts a counting speed of 900 notes / minute and will significantly improve operation efficiency in your daily cash-handling work.

RELIABLE FITNESS & AUTHENTICATING DETECTION

The K8 is equipped with the high-tech Validator JDU-62 and meets ECB standards of the Banknote Recycling Framework. Its Fitness Detection functions sort out taped, soiled, dog-eared and poor-quality banknotes from clean notes. Fitness settings can easily be changed to meet specific needs and requirements. The K8 features newly-developed IR/MG/MT sensors, which enhance Authenticating (CF) Detection.

FLEXIBLE SORTING EDIT MODES & ENHANCED FEEDER

The Sorting Pattern Edit Mode allows you the flexibility to customize the Sorting Pattern to keep up with customer demand. By adding the Vibration Roller to the current Feeder, the machine can feed the banknote with higher stability, which increases productivity.

EASY OPERATION

Operating the K8 is as simple as turning on the Power Switch, selecting the Mode and setting the banknotes onto the Hopper. The initializing process is remarkably fast. In addition, the large LCD and Touch Screen enable the operator to verify each operation and to observe more information.

SORTING STACKER

Each stacker is equipped with LED illumination to indicate a full stacker and a display where the number and type of banknotes are indicated by different colors. The operator will know immediately which stacker is full and what type of banknote is being sent to which stacker.

LARGE CAPACITY REJECT STACKER

The K8 will improve efficiency thanks to a Reject Stacker with a capacity of 200 notes. The condition of the Reject Stacker is indicated by an LED illumination for the operator to determine whether it is full or not.

EASY MAINTENANCE

The K8 is equipped with the self-cleaning function of sensors and requires minimal maintenance to maintain high performance over a long period of time. The transportation path can be opened widely for easy access to the banknote path, which helps facilitate maintenance and handling of jammed notes.

MULTIPLE CURRENCY SELECT (MCS) FUNCTION

A maximum of 4 currencies can be programmed depending on the demand of the customers. New denomination (if newly issued) can be easily updated.

K8 SPECIFICATIONS

Sorting Modes
Denomination, Fitness, ATM-fit, Face, Orientation, Issue

Dimensions
700H x 960W x 400D mm

Weight
Approx 130kg

Counting Speed
Max. 900 notes / minute

Hopper Capacity
Max. 1,000 notes

Stacker Capacity
Max. 200 notes

Stacking Method
8 Stacker Wheels

Display
Full Graphic Large LCD Display

Interface Link
RS - 232C

Power Source
100 - 240 V
50/60 Hz
